

# Medical Patch

This product is designed for Biotech360 Inc., USA. This device is designed for health monitoring of patients who are bedridden. Initial idea of product is to make device which can be used individually, which will have easiness in using for any nontechnical background users. So this device has a patch which stick to body near to heart.

It is wireless device which will receive heart and lung data like pulse rate, blood pressure, oxygen level, functioning through diaphragm and various sensors which will have contact to body.
